Abstracts

The global Fully Automated Urine Particle Analyzer market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Urine testing (urinalysis) can be divided into urine chemistry testing (the primary test using urine test strips) and urine sediment testing (done as a secondary test to more closely analyze samples with abnormal urine chemistry). The urine sediment test is an important test used to diagnose kidney and urinary tract diseases. This test works by classifying and measuring particles that form in urine, such as red blood cells, white blood cells, and bacteria.

The Fully Automated Urine Particle Analyzer is an instrument used to automatically analyze various types of particles in urine sediment. It usually includes multiple steps such as sample preprocessing, automatic identification, counting, classification and output of analysis results, and can quickly and accurately complete the automatic analysis of various particles in urine samples.

This report studies the global Fully Automated Urine Particle Analyzer production, demand, key manufacturers, and key regions.
