The fully automatic BET specific surface area and porosity analyzer is an analytical instrument used to measure the specific surface area and pore structure of materials. BET (Brunauer-Emmett-Teller) is a commonly used gas adsorption method for calculating the specific surface area of ??materials, that is, the surface area of ??materials per unit mass. This analyzer can accurately measure parameters such as the specific surface area, pore size distribution and pore volume of materials by automatically controlling the adsorption and desorption process. It is widely used in scientific research and industrial fields, especially in materials science and catalysis research.
