Abstracts

The capacitor winding machine is an automated equipment for producing capacitors. It is used to complete the winding, turning and blanking of the capacitor core, and to seal the capacitor core internally and externally. The process flow of capacitor winding is to wind materials such as metal film (or metal aluminum foil) and plastic film on the winding core, and set different winding turns or lengths according to the different capacitance values of the capacitor core. According to product type, it can be divided into semi-automatic and fully automatic. Fully automatic capacitor winding machines dominate the market.
