Abstracts

The global Fully Automatic Cast Saw Device market size is expected to reach \$ 742 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global production of fully automatic cast saw devices reached approximately 40 thousand units, based on an average market price of around US\$ 12,000 per unit. Industry gross profit margins generally ranged from 38% to 58%, reflecting higher automation levels, integrated safety systems, and software-enabled control features. Global production capacity in 2025 was estimated at about 50 thousand units, indicating sufficient manufacturing capability to support growing demand from hospitals and orthopedic centers.

Fully automatic cast saw devices are advanced electromechanical systems designed to automate cast removal procedures with minimal manual intervention. They integrate controlled oscillation, speed regulation, and safety feedback mechanisms to improve cutting precision, operational consistency, and patient comfort during orthopedic treatment.

The industrial chain includes upstream motors, oscillation modules, control boards, sensors, batteries, and structural components. The midstream focuses on system integration, software programming, safety validation, and performance testing. Downstream applications mainly involve hospitals, orthopedic departments, rehabilitation centers, and emergency care facilities.

The fully automatic cast saw device market is developing steadily as healthcare providers seek higher efficiency, safety, and consistency in orthopedic procedures. Increasing fracture treatment volumes, aging populations, and rising expectations for patient comfort are driving adoption of automated solutions. Compared with semi-automatic devices, fully automatic systems reduce operator dependence and procedural variability while improving workflow standardization. Advances in motor control, sensor

feedback, and embedded software are enhancing precision and safety performance. During 2026-2032, supported by hospital equipment upgrades, digitalization of clinical workflows, and replacement of conventional devices, the fully automatic cast saw device market is expected to maintain stable growth and gradually increase penetration in modern orthopedic care.
