Fully Automatic CCD Screen Printing Equipment for PCB is a high-precision screen printing system used in the PCB manufacturing process. The equipment uses a CCD vision system to automatically recognize fiducial marks or patterns on the substrate to achieve automatic alignment and high-precision printing. It is mainly used for solder mask printing, legend printing, and conductive silver/carbon paste printing. The equipment typically supports automatic loading, CCD alignment, automatic printing, unloading, and inline connection with drying and curing systems, making it a key piece of equipment in automated PCB production lines.

Upstream includes CCD industrial cameras, vision software systems, motion control systems (servo motors, linear motors, guide rails), screen printing stencils, squeegee systems, precision mechanical components, and automation control systems. Midstream consists of CCD screen printing equipment manufacturers and full production line integrators. Downstream customers are PCB manufacturers, including standard PCB, HDI boards, flexible PCBs, IC substrates, ceramic substrates, and glass substrates. Demand for this equipment is closely related to PCB capacity expansion and high-precision printing requirements.
