The global Fully-Automatic Coil Winding Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fully automatic winding machine is a new model developed to meet the requirements of high efficiency and high output. Fully automatic models generally adopt multi-head linkage design, use programmable controller as the control core of the equipment, and cooperate with manipulators and pneumatic control components. With the implementation of accessories to complete functions, such as automatic wiring, automatic foot wrapping, automatic trimming, automatic loading and unloading of skeletons, this model has extremely high production efficiency, greatly reducing the dependence on labor, and one operator can look after several sets. Such equipment has relatively stable production quality and is very suitable for processing occasions with high output requirements.
