## Abstracts

According to our (Global Info Research) latest study, the global Fully Automatic Double-end Terminal Crimping Machine market size was valued at US\$ 381 million in 2025 and is forecast to a readjusted size of US\$ 547 million by 2032 with a CAGR of 5.4% during review period.

The fully automatic double-head terminal crimping machine is a high-efficiency, high-precision wire harness processing equipment specifically designed for automatically completing the processes of wire cutting, double-end stripping, and double-end terminal crimping of electronic wires. It employs servo motor drive and PLC control, significantly reducing labor costs, improving processing efficiency, and ensuring wire harness consistency. This equipment is widely used in wire harness production in industries such as automotive, communications, and industrial electronics.

The double-head terminal crimping machine industry chain embodies the deep integration of precision mechanics and motion control technology. Upstream mainly involves the supply of core components, including servo motors, PLC controllers, precision sensors, pneumatic components, and crimping molds with extremely high wear resistance requirements.

Global sales in 2025 were approximately 106,200 units. Actual prices vary significantly depending on brand, model, and level of automation, with each unit priced between approximately \$2,500 and \$7,000. The industry's gross profit margin is between 30% and 40%.

The development of the fully automatic double-head terminal crimping machine industry

is primarily driven by the global trend of miniaturization in electronic products and the demand for flexibility in new energy vehicle production lines. Firstly, the widespread adoption of 800V high-voltage architecture in new energy vehicles has led to a surge in demand for large-section, multi-shielded power harnesses. Traditional single-head or manual crimping methods cannot guarantee electrical safety standards, directly driving the demand for specialized double-head crimping machines capable of handling high-voltage wires. Secondly, the continuous rise in labor costs and labor shortages have forced wire harness factories, which previously relied on labor-intensive methods, to accelerate automation upgrades. Fully automatic equipment, with its 8-10 times the capacity of traditional manual labor, demonstrates a very high return on investment.
