According to our (Global Info Research) latest study, the global Fully Automatic Gel Purification System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The automatic gel purification system is an automatic purification system for DNA or protein samples separated by gel electrophoresis. Gel purification is one of the common methods to separate and purify target molecules (such as DNA fragments, proteins, etc.). It separates the target molecules in the mixture from the gel and removes impurities and buffers to obtain pure target molecules. . A fully automatic gel purification system usually consists of steps such as gel cutting, target molecule adsorption, washing and elution. It integrates these steps in an automated manner to achieve high-throughput processing and efficient purification of samples. The system usually includes an automated sample processing platform, gel cutting and collection module, adsorption column and washing column, etc. In terms of operation, users only need to place the gel sample in the system and set relevant parameters, and the system can automatically perform steps such as gel cutting, target molecule adsorption, washing and elution, and finally obtain a pure target molecule sample. The fully automatic gel purification system has the advantages of automation, high throughput, high efficiency and consistency. It can greatly improve the efficiency and accuracy of gel purification and is suitable for biomedical research, gene sequencing, protein analysis and other fields.
