The global Fully Automatic Membrane Filter Presses market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Fully Automatic Membrane Filter Presses are equipment for solid-liquid separation and are commonly used in solid waste treatment, concentration and dehydration processes in industrial and environmental fields. It is an advanced and specialized variant of the traditional filter press that incorporates a flexible or elastic membrane into the filter chamber. The membrane can be made from a variety of materials, including rubber or Polypropylene.

Fully Automatic Membrane Filter Presses feature additional membranes that can be inflated or filled with liquid after filtration to further press the filter cake and improve dehydration. This kind of machine usually adopts an automated control system, which can realize fully automatic operation, including filter cloth tensioning, filter cake unloading, cleaning and other functions. Fully Automatic Membrane Filter Presses have a wide range of applications and are suitable for various solid-liquid separation occasions, such as sewage treatment, chemical industry, mining, metallurgy, etc.
