## Abstracts

According to our (Global Info Research) latest study, the global Fully Automatic Nitrogen Blower market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The fully automatic nitrogen blower is a laboratory equipment used to evaporate the solvent in the liquid sample through the purge action of nitrogen to obtain a concentrated liquid or solid sample. Compared with the traditional nitrogen blower, it is intelligent, automated and efficient, which can save manpower and time and improve the quality and accuracy of experiments. The main function of the fully automatic nitrogen blowing instrument is to achieve simultaneous concentration of multiple samples by setting or calling the nitrogen blowing method and controlling parameters such as nitrogen flow, heating temperature, and nitrogen blowing needle height. Fully automatic nitrogen blowers are widely used in the preparation of samples for analysis such as chromatography and mass spectrometry, as well as sample concentration in the fields of pesticide residues, environment, pharmaceuticals, biology, food and other fields.
