Abstracts

According to our latest research, the global Fully Automatic Parking System market size will reach USD 905 million in 2031, growing at a CAGR of 5.7% over the analysis period.

The fully automated parking system features completely enclosed parking spaces where cars are stored within a facility that is inaccessible to the public. These parking systems can be constructed as visible multi-story structures above ground or underground. Inside, they often resemble large shelving units. To use the fully automated parking system, the driver exits the vehicle in an entry area that looks like a small garage. From there, a platform beneath the car mechanically moves it to an internal parking space and places it in an available spot. When the owner returns to retrieve their car, they issue a request via a user interface near the entrance, prompting the system to bring their vehicle back out.
