Wafer Laser Stealth Dicing Machine is a semiconductor cutting equipment that uses laser stealth dicing technology. Stealth Dicing technology is a laser dicing technology that uses lasers, which has such features as the "completely dry process", "no kerf loss", "no chipping", "high bending strength" and the like. Stealth Dicing technology is a technology that focuses a laser beam of a wavelength that permeates through materials, focus internally and forms a starting point for cracking the wafer, then applies external stress to the wafer, separating it. The process is comprised primarily of two parts, namely the "laser irradiation process" in which the SD layer is formed to crack the wafer interior and the "expansion process" for separating the wafer.

Fully-automatic Wafer Laser Stealth Dicing Machine is an equipment that can realize fully automated operation in a series of processes from wafer loading, position calibration, dicing, cleaning, drying, to unloading.

According to our (Global Info Research) latest study, the global Fully-automatic Wafer Laser Stealth Dicing Machine market size was valued at US\$ 60.3 million in 2023 and is forecast to a readjusted size of USD 87.9 million by 2030 with a CAGR of 6.5% during review period.
