Abstracts

The global Fully Liquid-Cooled Overcharging System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to the latest data from the China Charging Alliance, there were 31,000 more public charging piles in February 2023 than in January 2023, a year-on-year increase of 54.1% in February. As of February 2023, member units within the alliance have reported a total of 1.869 million public charging piles, including 796,000 DC charging piles and 1.072 million AC charging piles. As the penetration rate of new energy vehicles continues to increase and supporting facilities such as charging piles develop rapidly, the new technology of liquid-cooled supercharging has become the focus of competition in the industry. Many new energy vehicle companies and pile companies have also begun to carry out technology research and development and layout of overcharging.

Fully Liquid-Cooled Overcharging System is an efficient charging system that can quickly dissipate the heat during the charging process through liquid cooling technology to achieve high-speed charging. The liquid-cooled charging module used in the Fully Liquid-Cooled Overcharging System does not have any air ducts on the front or back. It only relies on the coolant circulating inside the liquid-cooled plate to exchange heat with the outside world. Therefore, the power part of the charging pile can be fully enclosed and the radiator is Externally, the heat is brought to the radiator through the coolant, and then the external air blows away the heat from the radiator surface.
