Abstracts

The global Fully Open Ventilator Breathing Circuit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ventilator breathing circuit has a proximal link, a distal link, an expiratory tube extending between the proximal and distal links, and between the proximal and distal links. A suction pipe extending in between. The expiratory tube is a corrugated expiratory tube that is extendable between a fully compressed rest position and a fully extended rest position and has intermediate rest positions. The expiratory tube can maintain its resting length at a number of intermediate rest positions without the application of external force. The suction duct is a corrugated suction duct having a length that is variable between a fully compressed rest position and a fully extended rest position, inclusive, between a fully extended rest position and a fully compressed rest position multiple intermediate rest positions. The suction tube can also maintain these intermediate rest positions without the application of external force.
