According to our (Global Info Research) latest study, the global Fully Synthetic Vacuum Pump Oil market size was valued at US\$ 808 million in 2025 and is forecast to a readjusted size of US\$ 1011 million by 2032 with a CAGR of 3.2% during review period.

Fully Synthetic Vacuum Pump Oil is a specialized lubricating medium mainly composed of synthetic base oils such as PAO synthetic hydrocarbons, synthetic esters, PAG polyethers, PFPE perfluoropolyethers, or silicone oils, and formulated with antioxidant, anti-wear, rust proof, defoaming, and anti emulsification additive systems. It is used for sealing, lubrication, cooling, and pollutant removal of vacuum equipment such as rotary vane pumps, Roots pumps, screw pumps, and slide valve pumps. Its typical characteristics are lower vapor pressure, smaller volatility, stronger thermal oxidation stability, better viscosity retention, and can maintain longer oil change cycles and reduce pump chamber coking and oil mist under high-temperature continuous pumping, solvent containing or water containing conditions. In 2025, global Fully Synthetic Vacuum Pump Oil production reached approximately 60.38 K MT, with an average global market price of around US\$ 13,001 per MT.

With the increasing demand for utilization rate and cleanliness in semiconductor, lithium battery, pharmaceutical and chemical fine production, as well as vacuum heat treatment and vacuum drying processes, the penetration rate of fully synthetic products will continue to rise. The focus of competition is shifting from simple price to low volatility and low residual carbon performance, chemical corrosion resistance and solvent tolerance, comprehensive cost of oil life and energy consumption, and compatibility with exhaust gas treatment and oil mist filtration systems. Top brands are more likely to obtain premiums in high-end processes through formula platforms and stable supply,

while opportunities for local manufacturers mainly come from the substitution of mid to high end industrial grade and some harsh working conditions, customized viscosity and addition systems, and faster on-site service and oil management solution output.

Industrial grade fully synthetic vacuum pump lubricating oil is mainly aimed at general manufacturing and vacuum processes, such as vacuum heat treatment, vacuum drying, vacuum impregnation, packaging and vacuum forming. The key indicators are viscosity grade matching, anti-oxidation and thermal stability, anti-wear and anti rust, anti emulsification and water separation, low foaming and good air release. The control requirements for trace metals, halogens and volatile residues are relatively loose, and ISO VG viscosity and conventional physicochemical indicators are usually used as the main procurement line.

Food grade fully synthetic vacuum pump lubricating oil is mainly used in vacuum systems that may come into accidental contact with food processing and packaging. It is required to meet compliance requirements related to food contact, such as NSF H1 accidental contact level or equivalent regulatory requirements, and emphasizes low odor, non-toxic risk, good antioxidant and hydrolysis stability. At the same time, it is more sensitive to additive systems and transferables, and has higher requirements for packaging and document traceability.

Semiconductor grade fully synthetic vacuum pump lubricating oil is mainly used in high clean vacuum systems such as semiconductors and displays, based on its extreme sensitivity to process pollution. The focus is on ultra-low vapor pressure and ultra-low volatility, ultra-low metal ions and particles, ultra-low volatile residues such as sulfur, phosphorus, chlorine, etc., good resistance to chemical corrosion and plasma environment, as well as compatibility with front-end cold traps and exhaust gas treatment systems. It is common to use higher purity base oil systems and stricter clean control and batch consistency management, and provide more complete analysis reports and clean packaging solutions.
