According to our (Global Info Research) latest study, the global Fully Threaded Suture Anchor market size was valued at US$ 685 million in 2025 and is forecast to a readjusted size of US$ 954 million by 2032 with a CAGR of 4.9% during review period.

All-suture anchors are orthopedic implants made entirely of high-strength suture material, without traditional metal or rigid polymer anchors. They typically use compressible ultra-high molecular weight polyethylene (UHMWPE) suture bundles as the "anchor," pre-loaded with 1-4 high-strength sutures. After being inserted into the bone hole through a specialized guide, the suture bundle expands within the bone to achieve fixation. They are used for minimally invasive repair of soft tissue-bone interfaces such as the rotator cuff, ankle ligaments, and acetabular labrum. The upstream of the industry chain includes medical-grade UHMWPE fibers, high-performance polyester sutures, precision braiding and heat treatment equipment, and ethylene oxide sterilization service providers. The midstream consists of orthopedic innovation companies with Class III medical device registration certificates, requiring expertise in suture mechanical structure design, bone anchoring performance verification, fatigue testing, and GMP production systems. The downstream primarily targets sports medicine specialties and orthopedic departments in tertiary hospitals, entering clinical use through high-value consumables distributors or national/provincial orthopedic centralized procurement. In 2024, the global production of all-suture anchors was approximately 996,460 units, with an average price of US$633 per unit. The gross profit margin of major manufacturers is between 48% and 65%, with a single production line capacity of 10,000 units per year.

The market for Fully Threaded Suture Anchors continues to expand due to the rising

number of sports injuries, aging populations, and increasing use of minimally invasive procedures such as arthroscopy. Advances in biomaterials, including high-strength polymers and bio-composites, enhance anchor performance and biocompatibility. Hospitals and surgeons prefer fully threaded designs due to superior pull-out strength and improved surgical stability. Additionally, outpatient orthopedic surgery centers are becoming major demand drivers. Manufacturers focus on cost efficiency, automated production, and expanding product portfolios with absorbable and all-suture variants. Overall, market momentum is supported by clinical demand, technology upgrades, and broader adoption of arthroscopic repair techniques worldwide.
