Fumed silica is a type of silica that is formed by burning silicon tetrachloride in a hydrogen-oxygen flame. It is used as a filler in a wide range of industries, including adhesives, coatings, composites, and rubber. The fumed silica filler market is driven by the growing demand for high-performance materials in various end-use applications.

Fumed silica fillers have unique properties such as high surface area, low density, and small particle size, which make them ideal for use as reinforcing fillers in a variety of polymers. They are also used as thickeners, anti-settling agents, and anti-blocking agents in various applications. The market for fumed silica fillers is expected to grow due to the increasing demand for lightweight and high-performance materials in various end-use industries.

The Asia-Pacific region is expected to dominate the fumed silica filler market due to the growing demand for high-performance materials in countries such as China and India.
