According to our (Global Info Research) latest study, the global Functional Medicine Diagnostic market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Functional Medicine Diagnostic starts from the relationship between genetics, environment, psychology, physiology and lifestyle to study the pathogenesis of human body from functional decline to pathological changes. Through functional medicine intervention based on science and evidence-based, it studies the human body's individual differences and Starting from the overall linkage of organs and tissues, it enhances organ storage capacity, thereby reducing the risk of chronic diseases. It provides diagnosis and intervention treatment plans in health care, chronic disease treatment and anti-aging, and evaluates the risk of decline in the "function" of body organs.

As people face increasing mental pressure from work and family life, sub-health has become a major problem for domestic residents. Driven by people's increasing awareness of health care, the target customers of functional medicine testing are not limited to older people. Consumers (such as those aged 25 to 35) can also receive sub-health assessment and intervention services to improve health conditions and prevent diseases. In addition, the heavy workload and unhealthy lifestyle of urban white-collar workers have brought about many sub-health problems, such as sleep disorders, depression, anxiety and chronic fatigue. In order to maintain good health and prevent more serious problems, a wider group of people may receive functional medicine testing services, both physical and psychological.
