According to our (Global Info Research) latest study, the global Functional Polyurethane Resin market size was valued at US\$ 202 million in 2024 and is forecast to a readjusted size of USD 285 million by 2031 with a CAGR of 5.1% during review period.

In a narrow sense, polyurethane resins refer to compounds containing urethane bonds in their molecules, but in a broader sense, they are all resins derived from isocyanate compounds, including urea in addition to urethane bonds. , biourea, isocyanate and carbodiimide linkages. Since the practical application of polyurethanes was discovered by Otto Bayer et al. in Germany in 1937, they have been used in everything from gels to elastomers and even foams for rigid plastics, insulation and cushioning. This wide range of applications is due to the fact that polyurethane resins can be freely designed by selecting raw materials, which is one of the most important characteristics of polyurethane resins. This paper mainly studies the high functional polyester resin.
