Abstracts

The global Functional Sugar Alcohols for Food market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Functional sugar alcohols, also known as polyols, are a type of carbohydrate that are commonly used as sweeteners in food and beverages. Unlike traditional sugars, such as sucrose and fructose, sugar alcohols are not fully absorbed by the body, which means they provide fewer calories per gram and have a lower impact on blood sugar levels. In addition to providing sweetness, sugar alcohols also have functional properties that make them useful in food manufacturing. For example, they can help to improve the texture, mouthfeel, and shelf life of foods, as well as prevent crystallization in frozen desserts.
