Functionalized Micronized Rubber Powder (FMRP) is a micron-scale rubber powder (typically with a median particle size in the ~5–200 μ m range) produced by micronizing elastomers (from post-industrial rubber, end-of-life tires, or virgin rubber) and then introducing surface functional groups via chemical or physical treatment. The functionalization (e.g., adding carboxyl, hydroxyl, epoxy, amine, silane, or maleated functionalities) is designed to improve dispersion, compatibility, and interfacial adhesion in target matrices such as plastics, asphalt, coatings, adhesives, sealants, and rubber compounds, thereby enhancing properties like toughness, damping, crack resistance, or processability.
