Abstracts

According to our (Global Info Research) latest study, the global Fungal Pesticide market size was valued at US\$ 2096 million in 2024 and is forecast to a readjusted size of USD 5499 million by 2031 with a CAGR of 14.9% during review period.

Mainly refers to pesticides made from living fungi (including various spores and hyphae), including fungal insecticides made from entomopathogenic fungi, fungal nematicides, mycoparasitic fungi and antagonistic or competitive fungi. Synthetic fungal plant disease biocontrol agents and fungal herbicides made from plant pathogenic fungi.

The market outlook for fungal pesticides seems promising, with growing interest in sustainable and environmentally friendly pest control solutions. Fungal pesticides utilize naturally occurring bacteria to selectively target pests, providing a safe and effective alternative to traditional chemical pesticides. Growing awareness of the harmful effects of synthetic pesticides on ecosystems, human health, and non-target organisms is driving the demand for biobased pest control products. Moreover, stringent regulations surrounding conventional pesticides and the need for residue-free and organic farming practices are expected to boost the adoption of bacterial pesticides in agriculture. Despite the promising growth of the market, challenges such as the need for further research, education, and effective marketing strategies to build trust between farmers and consumers may affect the pace of adoption.
