The Furaltadone ELISA Kit is a detection tool developed based on the principle of enzyme-linked immunosorbent assay (ELISA), specifically designed to detect the content of Furaltadone in samples. Furaltadone is a nitrofurantoin antibiotic with a wide spectrum of antibacterial properties, and has been used as an antibacterial agent in fields such as animal husbandry. This kit achieves quantitative or qualitative analysis of furanone in samples through specific binding reactions between antigens and antibodies, utilizing enzyme catalyzed substrates to produce signal changes such as color or fluorescence. It has the advantages of high sensitivity, strong specificity, easy operation, and fast detection speed, and can obtain reliable detection results in a short period of time.
