Furan resin is a general term for resins made from carboxaldehyde as the main raw material. Due to its good corrosion resistance and simple manufacturing method, this type of resin has been widely used. Furan resin is resistant to non-oxidizing acids, alkalis, and organic solvents, which is of great significance in solving the problem of equipment corrosion caused by alternating acid and alkali media in production. Many properties are superior to phenolic, epoxy, polyester resins, etc. Furan resin can be used at temperatures of 180 degrees Celsius or even higher.
