## Abstracts

The global Furfuryl Alcohol market size is expected to reach \$ 1643 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Furfuryl alcohol is an organic compound with the chemical formula  $C_5H_6O_2$ . It is a colorless to light yellow transparent liquid. Furfuryl alcohol is an important organic chemical raw material, mainly used in the preparation of furan resin, and can also be used as a solvent or dispersant, wetting agent, etc. for dyes, varnishes, phenolic resins, and furan resins.

As a downstream deep processing industry of agricultural and forestry waste such as corn cobs, the furfural-furfuryl alcohol industry chain, especially the corn cob-furfural production link, will produce a large amount of wastewater, waste gas and waste residue, and has long been in a state of 'high pollution, high energy consumption and low yield'.

Furfural production enterprises are concentrated in the main corn producing areas. With the improvement of environmental protection requirements, small enterprises continue to withdraw from the market, and the 'de-capacity' process of the entire industry is relatively fast. By 2021, the furfural market has been in a state of tight supply.

This report studies the global Furfuryl Alcohol production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Furfuryl Alcohol and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and
