According to our (Global Info Research) latest study, the global Furnace Soldering Services market size was valued at US\$ 509 million in 2025 and is forecast to a readjusted size of US\$ 713 million by 2032 with a CAGR of 4.9% during review period.

To address the problems of low efficiency, inconsistent soldering quality, and susceptibility to damage to heat-sensitive components associated with manual soldering, in-furnace soldering services have emerged. Since the large-scale application of surface mount technology in the 1980s, the field of electronic manufacturing automation has developed significantly. Currently, in-furnace soldering services have evolved into a comprehensive service encompassing reflow soldering, wave soldering, vapor phase soldering, and selective soldering, widely used in consumer electronics, automotive electronics, aerospace, and communication equipment, significantly improving soldering yield and production efficiency.

As a crucial link in the electronic manufacturing supply chain, in-furnace soldering services are undergoing a transformation from 'equipment supplier' to 'process solution provider.' With the rapid development of emerging industries such as 5G, new energy vehicles, and artificial intelligence, the demand for high-precision, high-reliability soldering will continue to grow. Enterprises need to seize market opportunities and address technological, cost, and environmental challenges through technological innovation, service model upgrades, and supply chain collaboration to achieve high-quality development.
