The global Furnace Water-Cooled Power Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The furnace water-cooled power cable is a hollow water-through special cable used for high-current heating equipment. It usually consists of three parts: electrodes (cable heads), wires, and outer sheath tubes. Water-cooled cables typically consist of strands of copper wire that are soldered or crimped to copper terminals at each end of the cable, and the copper cable is covered with a rubber hose secured at the terminals with a non-magnetic stainless steel band.
