The global Furniture CNC Drilling Center market size is expected to reach \$ 15921 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

In 2025, global Furniture CNC Drilling Center production reached approximately 43k units, with an average global market price of around US\$200k per unit.

A Furniture CNC Drilling Center is a highly automated CNC machining system specifically designed for the production of panel furniture, customized home furnishings, cabinets, wardrobes, office furniture, and wood-based products. The machine is primarily used for vertical drilling, horizontal drilling, hinge hole processing, connector hole machining, grooving, and light milling operations on furniture panels. Through CNC control systems, servo drives, and automatic positioning technologies, the equipment enables high-precision, multi-position, and continuous processing, significantly improving manufacturing efficiency and product consistency. Modern furniture CNC drilling centers are commonly equipped with automatic loading and unloading systems, barcode identification modules, automatic tool changers, and manufacturing management software. They can be integrated with nesting machines, edge banding equipment, and intelligent storage systems to form flexible furniture manufacturing lines. The equipment is widely used in customized furniture, office furniture, hotel furniture, commercial display furniture, and decorative wood product manufacturing, making it a key machine in smart furniture production.

The upstream segment of the furniture CNC drilling center industry includes suppliers of steel materials, castings, linear guideways, ball screws, servo motors, CNC systems, reducers, pneumatic components, vacuum systems, electro-spindles, and cutting tools.

Representative suppliers include FANUC, Siemens, Mitsubishi Electric, Yaskawa, HIWIN, THK, NSK, Schneider Electric, Beckhoff, HSD, and Leuco. The midstream sector consists of furniture machinery manufacturers and intelligent production line integrators responsible for machine design, software development, automation integration, and equipment assembly. Downstream customers include manufacturers of customized furniture, kitchen cabinets, wardrobes, office furniture, hotel furniture, and wood products. Representative users include Oppein, Sophia Home, GoldenHome, IKEA, and Nobia. Growing demand for customized furniture and flexible manufacturing continues to drive adoption of CNC drilling centers.

The furniture CNC drilling center market is one of the faster-growing segments within the intelligent furniture manufacturing equipment industry. Driven by the expansion of customized home furnishing, personalized furniture production, and flexible manufacturing models, traditional manual drilling and single-process machines are increasingly being replaced by automated, digitalized, and intelligent equipment. Demand for higher productivity, greater accuracy, reduced labor dependency, and faster changeover capability continues to rise, accelerating adoption of six-sided drilling, automatic loading systems, barcode recognition, and MES integration technologies. Furniture manufacturers are also investing in smart factories and connected production systems to improve efficiency and order responsiveness. However, the industry remains influenced by fluctuations in the housing market, changes in furniture consumption cycles, relatively high equipment investment costs, and limited automation capabilities among some small and medium-sized enterprises. Future competition is expected to focus on automation, software ecosystems, flexible manufacturing capabilities, and integrated production solutions.
