Abstracts

Fused quartz is a non-crystalline (glass) form of silicon dioxide (quartz, sand). It lacks long range order in its atomic structure. Its highly cross-linked three-dimensional structure gives it a high using temperature and low thermal expansion coefficient. In optics, fused silica glass has a high transmittance from ultraviolet to near-infrared (185nm-00nm). Coupled with low refractive index variations, it exhibits ideal optical qualities for high-precision optics applications. In addition, the physical properties of fused silica glass make it particularly useful for high-performance applications in harsh conditions. This report mainly focuses fused quartz optics market.

According to our (Global Info Research) latest study, the global Fused Quartz Optics market size was valued at US\$ 269 million in 2023 and is forecast to a readjusted size of USD 446 million by 2030 with a CAGR of 7.6% during review period.

The key manufacturers of Fused Silica Optical Components in the world are UNI Optics, Edmund Optics, sphericon, Shanghai Optics, CLZ Precision Optics, Esco Optics, OPCO Laboratory and Eoptik, among which the market share of the top five manufacturers exceeds 25%, and Shanghai Optics is the largest manufacturer. The global production of fused silica optical components is mainly distributed in North America, Europe and China, among which the top three production regions account for more than 90% of the market share.
