Abstracts

The global Fusion Power Module market size is expected to reach \$ 50646 million by 2032, rising at a market growth of 12.1% CAGR during the forecast period (2026-2032).

The fusion power module is an integrated, prefabricated data center power supply solution. It's not a single device, but rather a modular "building block" that integrates, pre-installs, and pre-tests all the power supply and distribution equipment required by a data center (such as transformers, UPS, distribution cabinets, batteries, monitoring systems, etc.) in the factory. Through end-to-end collaborative design and deep device matching, it maintains high efficiency over a wider load range. A built-in unified intelligent management system enables end-to-end visibility, manageability, and controllability, supporting predictive maintenance.

This report studies the global Fusion Power Module demand, key companies, and key regions.
