Abstracts

According to our (Global Info Research) latest study, the global GaAs LPE Epitaxial Wafers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

GaAs liquid phase epitaxial wafer is a kind of epitaxy carried out in the liquid phase. The principle is that gallium arsenide is used as a solute and is dissolved in high-purity gallium (solvent) at high temperature to form a saturated solution; when the temperature drops, supersaturation occurs, When this supersaturated solution is in contact with the substrate, gallium arsenide begins to precipitate, nucleate and crystallize on the surface of the substrate, thereby realizing liquid phase epitaxy growth. By controlling the supersaturation degree of the gallium arsenide solution, the growth rate of the gallium arsenide epitaxial layer can be adjusted, thereby controlling the thickness of the thin film.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest

Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
