GaAs is increasingly used as a replacement for silicon because of its enhanced electronic properties. GaAs has high saturated electron velocity and electron mobility, which allow GaAs components to function efficiently at frequencies above 250 gigahertz (GHz).

SCOPE OF THE REPORT:

This report focuses on the Gallium Arsenide Components in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The mobile device segment dominated the GaAs components market and accounted for a major part of the overall market share. The key growth driver for this segment is the high demand for GaAs components for the manufacture of communication devices such as smartphones. Also, the rise in the consumption of data has further contributed to the increase in the usage of GaAs components. Such increasing adoption of GaAs components in the mobile device market is primarily due to its better efficiency and longer battery life for smartphones and tablets as compared to CMOS power amplifier. In this market study, analysts have estimated the APAC region to dominate the GaAs components market during the forecast period. A major portion of the revenue in the global market comes from APAC, primarily because of the high demand for GaAs components from communication device manufacturers in the region. The major driver for the dominance of the GaAs components market in APAC is the increasing demand for power applications, along with high-growth economies. Furthermore, the increasing smartphone penetration in developing countries and the growing wireless infrastructure will drive the growth of this market segment during the forecast period.

The worldwide market for Gallium Arsenide Components is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
