Abstracts

According to our (Global Info Research) latest study, the global Gallium Arsenide Diode market size was valued at US\$ 2083 million in 2024 and is forecast to a readjusted size of USD 3418 million by 2031 with a CAGR of 7.4% during review period.

Gallium arsenide (gallium arsenide), chemical formula GaAs. black-grey solid, melting point 1238°C. It is stable in air below 600°C and is not attacked by non-oxidizing acids. Gallium arsenide is an important semiconductor material. It is a group III-V compound semiconductor. Gallium arsenide body effect diode is a new type of semiconductor device a microwave oscillator device.

GaAs diodes have a high electron mobility, which means they can operate at higher frequencies compared to traditional silicon diodes. This makes them suitable for high-speed switching and signal processing applications. GaAs diodes have lower noise levels compared to silicon diodes, which makes them advantageous in low-noise applications such as radio frequency (RF) amplifiers and microwave devices. GaAs diodes can emit and detect light efficiently, making them suitable for optoelectronic devices such as light-emitting diodes (LEDs), laser diodes, and photodetectors. GaAs has a wider bandgap compared to silicon, allowing it to operate at higher temperatures without losing its performance characteristics. This feature is important in high-temperature environments. GaAs diodes are commonly used in RF applications, including microwave frequency amplifiers, mixers, and oscillators. Due to their high-speed performance and radiation resistance, GaAs diodes are also used in aerospace, satellite communication, and military applications.
