A Gallium Arsenide (GaAs) Single-Mode VCSEL is a type of semiconductor laser that emits light in a single, well-defined mode. VCSEL stands for Vertical Cavity Surface Emitting Laser, which means that the laser emits light perpendicular to the surface of the chip, as opposed to edge-emitting lasers that emit light from the edge of the chip.

GaAs single-mode VCSELs are widely used in optical communications and sensing applications, such as fiber-optic communication networks, data centers, and medical imaging. They offer advantages over other types of lasers, including high efficiency, low threshold current, narrow linewidth, and high reliability. These characteristics make GaAs single-mode VCSELs ideal for applications requiring high-speed, low-power, and long-distance communication, as well as high-resolution sensing.
