According to our (Global Info Research) latest study, the global Gallium market size was valued at USD 331.3 million in 2023 and is forecast to a readjusted size of USD 439.4 million by 2030 with a CAGR of 4.1% during review period.

Gallium is a soft, silvery metallic element with an atomic number of 31 and the chemical symbol Ga. Solid gallium has a low melting temperature (~29 degrees Celsius, or °C) and an unusually high boiling point (~2,204 °C). Because of these properties, the earliest uses of gallium were in high-temperature thermometers and in designing metal alloys that melt easily. The development of a gallium-based direct band-gap semiconductor in the 1960s led to what is now one of the most well-known applications for gallium-based products—the manufacture of smartphones and data-centric networks.

Global Gallium Arsenide (GaAs) key players include Chinalco, Zhuhai Fangyuan, Jinjiang Group, Beijin Jiya, East Hope, etc. Global top five players hold a share about 55%.

Japan is the largest market, with a share about 35%, followed by China and North America, having a total share about 50 percent.

In terms of product, Primary gallium is the largest segment, with a share about 55%. And in terms of application, the largest application is Semiconductor industry, followed by Solar industry, Magnetic material industry, Petroleum industry catalyst, Medical device field, New materials research and testing field.
