## **Abstracts**

According to our (Global Info Research) latest study, the global Galvanised Steel Wire market size was valued at US\$ 1928 million in 2024 and is forecast to a readjusted size of USD 2930 million by 2031 with a CAGR of 6.4% during review period.

Galvanized steel wire is made by drawing high-quality carbon structural steel such as 45#, 65#, 70#, 80#, 90#, and then heat treating and galvanizing. It is mainly used for the manufacture of galvanized steel wire mesh, construction engineering, springs, and various steel wire ropes. According to different uses and processing methods, galvanized steel wire can be divided into hot-dip, electroplating, mechanical plating, cold plating and other types. At present, there are two methods for galvanizing steel wire: multi-line continuous hot-dip and electroplating. Electrogalvanizing is obtained by applying an external power source and using electrodeposition to obtain a coating. The obtained coating is composed of fine pure zinc grains. Hot-dip galvanizing relies on physical thermal diffusion to form a coating. First, an iron-zinc compound is formed, and then a pure zinc layer is generated on the surface of the iron-zinc compound. Hot-dip galvanizing will reduce the mechanical properties of the steel wire. Galvanized steel wire ropes that require high strength and high corrosion resistance are mostly twisted with electrogalvanized steel wire. The mainstream products on the market include galvanized steel wire heat-treated state, galvanized steel wire drawn state, micro rope, etc.

As an important building material, the market demand for galvanized steel wire is affected by many factors, including infrastructure construction, real estate development, and the demand for power cables. In recent years, with the continuous increase in electricity consumption in the whole society and the acceleration of the construction of

smart grids, the demand for power cables has also increased, which in turn has led to an increase in the market output of galvanized steel wire. In addition, the development of the galvanized steel wire industry is also affected by factors such as technological progress and increased environmental protection requirements, which have prompted the industry to optimize and upgrade its structure, especially the rapid development in new energy, environmental protection, high-end manufacturing and other fields, which has brought new market opportunities to the galvanized steel wire industry.
