Galvanized aluminum spring steel wire is a high-strength steel wire that has been treated with zinc and aluminum, and has good corrosion resistance and high elasticity. By coating the surface of the steel wire with a layer of zinc and aluminum alloy coating, this steel wire can not only effectively prevent rust, but also maintain its mechanical properties in harsh environments. It is often used in the manufacture of springs, fasteners and other application scenarios that require high strength and fatigue resistance, especially in outdoor or humid environments.
