## Abstracts

According to our (Global Info Research) latest study, the global Galvanized Steel Flange market size was valued at US\$ 672 million in 2025 and is forecast to a readjusted size of US\$ 822 million by 2032 with a CAGR of 3.0% during review period.

In 2025, global Galvanized Steel Flange production reached approximately 100,500 k units with an average global market price of around US\$ 6.5 per unit, and a gross profit margin of approximately 10%-30%. Galvanized Steel Flanges are pipe connection components made from steel and coated with zinc to enhance corrosion resistance in outdoor, humid, or mildly corrosive environments. They are used to connect pipes, valves, pumps, and fittings in water supply, HVAC, fire protection, irrigation, and industrial piping systems where durable bolted joints are required. Galvanizing can be hot-dip or electro-galvanized, providing a protective barrier and sacrificial corrosion protection. Flanges are manufactured to standardized dimensions and pressure ratings, and may include threaded or slip-on configurations. Key requirements include dimensional accuracy, flatness, coating thickness uniformity, bolt-hole precision, and compliance with piping standards to ensure leak-tight sealing and long service life.

The industrial chain of Galvanized Steel Flanges includes upstream inputs such as carbon steel billets/plates, zinc ingots, machining consumables, cutting tools, and surface pretreatment chemicals. Midstream manufacturing covers forging or casting, CNC machining, drilling bolt holes, surface cleaning, galvanizing, inspection for dimensions and coating, and packaging. Downstream users include pipe system contractors, HVAC installers, fire protection companies, municipal utilities, irrigation projects, and industrial maintenance teams. Services include specification selection, installation guidance, gasket and bolt matching support, and replacement supply.
