Abstracts

The global Galvanized Steel Sheet for Automobiles market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Corrosion resistance requirements: Galvanized steel sheets have good corrosion resistance and can effectively resist the erosion of the car body by the external environment and extend the service life of the car. This property makes galvanized steel sheets widely used in automobile manufacturing.

Technological progress: With the continuous advancement of science and technology, the production technology and processes of galvanized steel sheets are also constantly improved and innovated. New galvanized steel sheet products have higher corrosion resistance, better formability and welding performance, and can meet the higher requirements of the automotive manufacturing industry for material performance.

Lightweight demand: With the increase in global automobile production and the requirements for energy conservation and emission reduction, automobile lightweighting has become an industry trend. As a lightweight and high-strength material, galvanized steel plate can meet the needs of lightweight vehicles, reduce the weight of the vehicle itself, and improve fuel efficiency.
