According to our (Global Info Research) latest study, the global Galvanostat market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A galvanostat is an electrometers used to measure the current in an electrochemical cell under controlled galvanic conditions. It is used in electrochemistry to study the behavior of materials in various electrolytic solutions, particularly in processes such as corrosion, electroplating, and battery manufacturing. The galvanostat applies a known current to the cell and measures the resulting potential difference, allowing researchers to investigate the electrochemical reactions and kinetics. It is a critical tool for understanding and controlling electrochemical processes.
