Fruits are natural sources of antioxidants, vitamins and minerals. Fruit powders are produced either through spray dried method or freeze dried method. Spray drying is a method to produce dry powder from slurry or juice of the fruit by drying with a hot gas rapidly.

Freeze drying is a method that works by freezing the fruit first, then sublimating the frozen water in the fruit into gas by reducing the surrounding pressure. This process provides a longer shelf life to the product. Fruit powders are used as a flavoring agent in various industries coupled with nutritional value of the fruits.
