According to our (Global Info Research) latest study, the global Gamete Preservation market size was valued at US\$ 1561 million in 2024 and is forecast to a readjusted size of USD 2406 million by 2031 with a CAGR of 6.4% during review period.

Gamete preservation is a technique to store and preserve gametes such as spermatozoa and oocyte for some timespan to use it in the future. The gamete preservation banks are responsible for the storing and freezing of human gametes. The technique of gamete preservation is preferred by men just as women with a probability of losing fertility, due to threat or during clinical treatment of infertility. Gamete preservation banks take and store a huge part of spermatozoa and oocyte for the ones who cannot conceive. Stored gamete cells are utilized by couples for infertility treatments such as in-vitro fertilization or assisted reproductive technology(ART).

Improvements in cryopreservation techniques?rise in concern about infertility issue, the emergence of fertility tourism, increase in incidence of miscarriages, escalation in the rate of obesity, and surge in awareness toward infertility treatment are the key factors that drive the growth of the global gamete preservation market.

According to the Global Use of Medicines 2023 released by IQVIA Institute, the global drug expenditure in 2022 was about US\$1.48 trillion (excluding COVID vaccine and treatment-related expenses), and it is predicted to grow at a rate of 3%-6% in the next few years. In terms of drug expenditure, this number in China was about 166 billion dollars in 2022. It is expected that the expenditure on medicines will increase in the next few years. From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of health awareness will drive the demand for medicines.
