Abstracts

According to our (Global Info Research) latest study, the global Gamma Camera Plates market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Crystal scintillation gamma camera plates are widely used in Nuclear Medicine to image tissues containing gamma-emitting tracer compounds introduced into the patient. A matrix of photomultiplier tubes or other light sensors optically coupled directly to the detector or a window detect the scintillation photons produced in the crystal. The camera system electronics compute the locations of the scintillation events in the crystal and evaluate the corresponding intake of the tracer in the tissue.
