According to our (Global Info Research) latest study, the global Gamma Ray Imaging System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Gamma Ray Imaging System is a versatile technology used not only in the medical field but also in industrial applications. In industrial settings, gamma ray imaging systems are commonly used for non-destructive testing (NDT) to inspect the integrity of materials, structures, and components. In industrial NDT, gamma ray imaging systems use a radioactive source to emit gamma rays, which pass through the object being inspected. The gamma rays are then detected by a sensor or imaging device, which creates a detailed image of the internal structure of the object. This allows for the detection of defects, cracks, and other anomalies that may not be visible on the surface, without causing damage to the object itself.

The Global Info Research report includes an overview of the development of the Gamma Ray Imaging System industry chain, the market status of Nuclear Power (Portable, Desktop), National Defense (Portable, Desktop), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Gamma Ray Imaging System.
