## Abstracts

GaN has superior properties than silicon such as high breakdown voltage and saturation velocity. The bandgap in GaN is almost thrice the bandgap of silicon. Thus, GaN has the ability to improve power conversion efficiencies, raise power density levels, extend battery lives, and accelerate switching speeds in different end-user segments such as consumer electronics products, telecommunications hardware, electric vehicles, or domestic appliances.

According to our (Global Info Research) latest study, the global GaN Devices market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

According to this market research and analysis, the opto semiconductor segment accounted for the maximum shares and dominated the market. The increasing adoption of GaN opto-semiconductors by various sectors such as military, aerospace and defense, and consumer electronics, will drive the growth of the market in the next few years.
