## **Abstracts**

GaN has superior properties than silicon such as high breakdown voltage and saturation velocity. The bandgap in GaN is almost thrice the bandgap of silicon. Thus, GaN has the ability to improve power conversion efficiencies, raise power density levels, extend battery lives, and accelerate switching speeds in different end-user segments such as consumer electronics products, telecommunications hardware, electric vehicles, or domestic appliances.

According to our (Global Info Research) latest study, the global GaN RF Devices market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In terms of geographical regions, North America will be the major revenue contributor to the market throughout the next five years. The increasing applications of GaN RF devices in the defense sector, the large-scale expansion of 4G networks, and the introduction of 5G, will fuel the growth of the market.
