Abstracts

According to our (Global Info Research) latest study, the global Gantry Boring Milling Machining Center market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Gantry Boring Milling Machining Center adopts the viaduct structure, so that the 3 main moving parts of the heavy machine tool are in the lightest quality, the least driving force and dynamic servo response faster favorable conditions. Bearing the movement of the bed and large workpiece of the floor table as a whole, not only the overall structure is compact, high utilization of space, but also conducive to the rigidity of the machine tool, improve the accuracy and installation, transportation convenience. The guide support of the large span beam adopts the design of double-sided single high-strength guide rail with multiple sliding blocks to avoid the over-positioning of the large stroke motion guide parts and the high precision machining requirements of the foundation large parts. The transmission technology of pinion and rack anti-backlash gear box for large stroke drive makes the minimization of theoretical stroke be realized in the movement of mechanical structure. Using the double drive and double feedback 'gantry shaft' function of the CNC system, the synchronization problem of the long span bridge gantry double drive satisfying the high precision positioning and servo response is solved.
