According to our (Global Info Research) latest study, the global Gantry CNC Plasma Cutting Machine market size was valued at US\$ 648 million in 2025 and is forecast to a readjusted size of US\$ 856 million by 2032 with a CAGR of 4.0% during review period.

A Gantry CNC Plasma Cutting Machine is an industrial metal cutting system that uses a computer-controlled gantry structure to move a plasma torch across large metal plates or sheets. It cuts electrically conductive materials such as carbon steel, stainless steel, aluminum, copper, and brass by generating a high-temperature plasma arc that melts and removes the material along a programmed cutting path. Compared with small table-type plasma cutters, gantry CNC plasma cutting machines are usually designed for larger workpieces, heavier plates, higher cutting productivity, and continuous industrial production, making them widely used in steel fabrication, shipbuilding, construction machinery, automotive parts, pressure vessels, metal structures, and general manufacturing.

In 2025, global Gantry CNC Plasma Cutting Machine production reached approximately 6,495 units, with an average global market price of around US\$ 97,000 per unit. The production capacity of Gantry CNC Plasma Cutting Machine is approximately 8 K units per year, the average gross profit margin was 28-31%.

The upstream includes raw materials such as section steel and sheet metal for gantry frame manufacturing, as well as core parts including CNC controllers, plasma power supplies, servo motors, linear guides and electrical accessories; midstream manufacturers complete mechanical processing, overall assembly, system debugging and precision calibration to launch finished equipment; downstream serves end users in

steel structure, shipbuilding, engineering machinery and pressure vessel industries, with distributors, agents and after-sales service teams undertaking product circulation, sales and technical maintenance.

The cost structure is mainly composed of gantry mechanical structure raw material cost, core electrical and plasma system component cost, labor and energy cost for assembly and commissioning, plus quality inspection expense, packaging and logistics cost, as well as daily operation and after-sales reserve overhead.
