According to our (Global Info Research) latest study, the global Gantry Electroplating Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Gantry electroplating equipment is a kind of equipment used for electroplating process. It gets its name from its structural shape resembling a gantry, featuring beams and columns. Gantry-type electroplating equipment usually consists of gantry frames, beams, mobile tables, electroplating tanks, etc. The gantry is the main supporting structure of the equipment, usually made of steel, with a stable structure and strong bearing capacity. The beam is located above the gantry to hang and support the plating tank and other related equipment. The mobile table is located on the beam and can move horizontally on the beam so as to place the workpiece to be electroplated in a suitable position. The gantry-type electroplating equipment deposits metal ions on the surface of the workpiece through the electrolyte and current in the electroplating tank to form a uniform metal coating. Plating baths are usually made of corrosion-resistant materials and are coated with insulation on the inside to prevent the electrolyte from reacting with the equipment itself. Gantry type electroplating equipment is usually used for electroplating of large workpieces, and has the advantages of stable work and convenient operation. It is widely used in automotive, aerospace, electronics and other industries to provide functions such as anti-corrosion, aesthetics and increasing the hardness of workpieces.
