According to our (Global Info Research) latest study, the global Gantry Truss Manipulator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The truss manipulator is a fully automatic industrial equipment based on the rectangular X, Y, Z three-dimensional coordinate system, which can adjust the workpiece position or realize the trajectory movement of the workpiece. Its control core is implemented through industrial controllers (such as PLC, motion control). Through the controller's analysis and processing of various input signals (various sensors, buttons, etc.), and after making certain logical judgments, it issues execution commands to each output element (relay, motor driver, indicator light, etc.) to complete X, Y, the joint motion between the Z three axes to achieve a complete set of fully automatic operation processes.

CNC machine tools are an essential means of processing and production for modern industrial manufacturing. In order to allow the CNC machining industry to grow rapidly, in addition to the guidance of national policies, an important reason is that the machine tool casting industry has basically allocated resources by the market and has begun to enter CNC machining automated production. In this field, the market competitiveness of truss manipulators has also been greatly improved. The purpose of using CNC machine tools is to greatly increase the scope of use, and to a certain extent, promote industrial

production and improve work efficiency. Since the technology of global CNC machine tools has reached a mature stage, various fields have begun to pay extensive attention to CNC machine tools. With the widespread application of CNC machine tool truss manipulators, the current machine tool casting industry is in a period of rapid development, and the industry is moving towards success. A stage of rapid development of quantification and quality.
